

DREAM CREAM

DESCRIPTION

Dream Cream contains the active ingredient found in the prescription medication Viagra called Sildenafil Citrate. Each ½ gram dose (1/2 ml or pea-sized amount) contains 10 mg of Sildenafil Citrate dissolved in a hypoallergenic vanishing cream transdermal base. This vehicle is designed to enhance the rate of absorption and to cause the medication to be retained locally in order to maximize local effects and metabolism while minimizing the potential for systemic (internal) side effects. **Dream Cream** requires a prescription from your physician.

WHO CAN BENEFIT FROM USING DREAM CREAM

Studies have reported that over 43% of the women in America experience little or no sexual satisfaction from clitoral orgasm and only 25% achieve orgasm with intercourse. In fact, according to studies, numerous women between the ages of 18 and 80 do not even know what an orgasm is or how it is achieved! Whether someone is multi-orgasmic or among the 43% of women who are sexually frustrated, any woman who desires maximum sexual fulfillment, greater intimacy and enhanced relationships stands to benefit from regular use of **Dream Cream**.

USE

Dream Cream should be applied directly to the clitoris at least 30 minutes prior to anticipated sexual relations and gently massaged in. Duration of effect ranges from 30 minutes to 2 hours and heightens both ease of stimulation and intensity of orgasm.

CONTRAINDICATIONS

Patients with a history of sensitivity to Sildenafil Citrate should not use this product. This product should not be used concurrently with any nitrates or nitrate-containing medicine. Side effects are generally mild and include headache, dizziness and stomach upset.

HOW SUPPLIED

Dream Cream is packaged in 5 ml pre-filled topical syringes providing 10 (1/2 ml) applications.
